AUTEN PEONIES

FAMOUS FOR COLOR

EDWARD AUTEN, JR.

Princeville, Illinois

Auten Peonies Are Different

Our ten acres of Peonies are growing in fertile "corn belt" soil, ideal for producing strong roots. We take extraordinary care to keep our plants healthy and true to name. Roots are dug to order and shipped to you fresh and full of vigor. We send liberal 3 to 5 eye divisions properly cut. This is the best size to plant, better even than a large clump. See full planting and cultural directions on another page.

FREE PEONY — WHITE BEAUTY

A very large, exquisite pearly white double, one of our finest. If your order includes two or more peonies selling at \$1.25 or more each, we will add a nice root of White Beauty free of charge, a \$1.50 value.

Many prices are reduced for 1942.
No price increases except 12 kinds listed 1941 at 50c each are now 60c.

TERMS — Cash with order. Prices include delivery in U. S. east of Rockies on orders of \$2.50 or more. Under \$2.50 add 25c for postage and packing. Pacific coast orders under \$10.00 sent express collect. Canadian orders, add 25c for postage, large orders sent charges collect. Send import permit, and remit in U. S. exchange. Any complaint as to condition of roots must be made immediately upon receipt of package. We make no warranty as to growth as we do not control conditions nor care in our customers gardens.

SHIPMENT—Beginning Sept. 1, until ground freezes. Fall planting is best.

All are Auten Originations unless otherwise indicated.

OFFICINALIS HYBRIDS. Advanced Seedlings (Auten)

The development of a new variety is a slow process, usually requiring 12 years work before it can be introduced. Some fine new seedlings are carried for observation which are eventually not named, but they are decidedly worth while, and some of them are here offered at low prices so

that many may enjoy these fine new colors. These represent real bargains and give the fine color effects of the named kinds. Try some of them.

THE AUTEN ORIGINATIONS

FOREWORD

Those who have seen our ten acres of Peonies in bloom can read this catalogue with understanding of the many fine and "different" kinds it offers. To others we give a few facts about our work, hoping they will have confidence to place an order with us and grow for themselves some of these fine new kinds.

I have been growing and studying Peonies for 31 years, and developing new kinds for 25 years; have grown over 300 kinds, and have watched progress in Peonies as shown at National shows every year since 1923 except 4 or 5. I have raised many thousands of new Peonies from seed in order to obtain new kinds. From these I have named over 180 kinds, and still have about 400 more under advanced trial. The Seedling Committee of the American Peony Society has given me more official awards on new seedlings than to any other originator. So far only 33 of my named kinds have been given an official rating by the Society, but of these, 9 rated from 8.60 to 8.95, and 21 have the honor rating of 9.0 or higher (10.0 being top). At the present time 150 Peonies have this honor rating, and the Auten total of 21 of these is the largest for any one man.

Early in my work I was impressed with the widely varying color and type preferences of different people, and I realized the importance of striving for improvement in every type and color. As a result, the Auten Originations offer a wide range from which you may choose. They are outstanding in the following respects:

1. Clear, unfading dark reds in all types, single, Japanese, semi-double and double, both in the common species, and the Hybrids.

2. Reds with a clear purplish cast which many people definitely like, but which, unlike many older reds, are not ugly and coarse.

3. Singles and Japs of all colors, setting entirely new standards of excellence.

4. White doubles and pink doubles comparable with the best, and with most of the late ones opening better than many of the older kinds.

5. Officinalis Hybrids giving a ten day season of bloom before the common kinds start, in magnificent shades of red and pink.

6. Novelty colors in various types, giving distinctive effects in refined tones, a real advance in that regard over the odd Japs which came from Japan.

WHITE SINGLES. Auten Originations

White Perfection (9.18). Midseason, medium size and height. All that the name implies, a prize winner, and universally admired. An indispensable variety	2.00

FROM NEBRASKA—"I want to tell you how lovely the Peonies from you bloomed this spring. They were all charming, but I thought Nippon Beauty was the loveliest red Jap I have ever seen. It bloomed so profusely, too."

FROM IOWA—"Arcturus, Kickapoo and Kaskaskia very fine. Kickapoo very hard to beat. In durability of color they easily lead all other singles I have. White Perfection the best white single."

FROM ILLINOIS—"Am glad to add that the roots I have from you the past two years have been the best that I have ever received. They never fail to bloom the next spring, while roots from other first class growers take from two to four years to bloom. I have Manoa, Spoon River and Nippon Parade of your own originations which I prize very highly."

Planting and Cultural Directions

IMPORTANT—Open your package of roots immediately when they arrive. Plant as soon as possible but if you have to wait a few days, either keep moist in open box in cool cellar, or better yet, bury in garden.

Plant Peonies in good, well drained soil, in full sun if possible, and away from trees, buildings, etc. Do not plant where a peony has been before, unless all old soil is taken out and replaced with fresh. Plant 3 to 4 feet apart; set so that the eyes point upward and are 2 to 3 inches below the top of ground (very important). Give each root 2 quarts of water when planted, and then make a 6 inch mound of dirt above ground level to prevent heaving, scrape mound away late next spring.

In northern states, a mulch the first winter is advisable.

Fall is the natural planting time for Peonies. (After Sept. 1st and before Nov. 1st if possible). Spring planting is possible but is not recommended. Never move an old clump without dividing it. Never dig out a piece of a clump with a spade. This invites decay in the part left. Peonies do not need to be divided and re-set so long as they bloom well, unless increase is desired. For increase, divide at 3, 4 or 5 years, in the fall.

Peonies need their full space of 3 to 4 feet in all directions. Do not crowd smaller perennials among them unless extra room is given. Only shallow cultivation is needed, to keep down weeds and grass. Use fertilizers sparingly, bone meal one year, hard wood ashes the next, two handfuls per large plant worked in topsoil six inches from the stems. The use of animal fertilizer is dangerous, as the bacteria of decay which makes it valuable, may also in time attack the Peony root and cause a damaging rot. The use of balanced commercial fertilizers is not recommended as a general practice, as they contain too much nitrogen. If soil is naturally very poor, sandy or gravelly, commercial fertilizer may be used sparingly, taking care to apply it when ground is wet, and watering enough to prevent burning. Keep it away from the stems.

Watering during dry summers, and just before blooming is beneficial. Give a thorough soaking with two gallons or more of water once every week or ten days, not oftener. Daily watering or sprinkling is injurious. After October 1st, cut off all foliage close to the ground, and burn at once. This is the best preventive measure against blight, and usually the only one necessary. Should blight appear in spring, before blooming, pinch out and burn all diseased tissue at once, and spray with weak Bordeaux, in proportions of one pound of bluestone and one half pound of hydrated lime to 50 gallons of water. To obtain large blooms, remove all side buds when they are the size of small hazelnuts. To obtain a fine cluster, pinch out the large center bud. Blooms cut before half open and brought indoors will show finer color and last longer than blooms left on the plant or cut when fully open. When cutting blooms, let two or three leaves remain on every stub of the stalks. Do not cut more than half or two-thirds of the blooms. A late freeze in spring sometimes causes buds to blast.

Ants do no damage except to carry blight (if present) or if very numerous. Find their nests and poison or scald them out.

A ten foot length of two inch diamond mesh chicken wire, two feet high, looped loosely about the plant just before blooming, makes an unequalled support, and is inexpensive. It can be removed immediately the bloom is done. Most Peony supports are too small, squeeze the foliage too close, and invite blight.

Plant the healthy, fresh dug Auten roots, follow above directions carefully, and you should have many years of pleasure from your Peonies.

NOVELTY COLORS

They naturally carry some purple and may fade some at the end, but are still very much worth-while. We have many other Novelty varieties under trial. Write us.
